Dear Kent Fire & Rescue Service,

RE: Planning ref 20250251 Construction and Operation of a Green Hydrogen Electrolyser and associated infrastructure response to Kent Fire & Rescue Service (KFRS).

Please find below and enclosed further supporting information relating to the KFRS consultee enquiry relating to development application no. 20250251 for a Green Hydrogen Electrolyser and associated infrastructure at Northfleet, Kent.

Enquiry	HYRO response
<i>‘However, given the nature of the site please confirm if there will be an emergency response plan (ERP) provided, by the client’s design team, during the planning consultation process. An ERP this would help KFRS in determining a suitable and robust emergency response for the safety of employees and emergency first responders.’</i>	An Emergency Response Plan (ERP) would be expected to be developed prior to the start of operation of the facility. At the current stage it is not possible to complete an Emergency Response Plan (ERP) since the exact procedures for the operation of the site cannot be defined until the suppliers and equipment have been agreed and the site is past the detailed design stage. As the project progresses through detailed design, construction and commissioning, further detail will become available, allowing emergency response to be fully developed for the site.

Yours sincerely,

Development Project Manager
